Continuation of 5. does NOT place the application in condition for allowance because: the applicant's argument that the output of the polarization controller can not be the output of the polarization mode dispersion compensation apparatus is not persuasive. As seen in the figures the output (D) of the apparatus (Figure 1) is a direct derivative of the signals (S) which are direct derivatives of the output of th polarization controller, thus the output of the apparatus (D) is, given the broadest reasonable interpretation, the output of the polarization controller. Applicant's other arguments have been previously addressed .
